

Project for proportional representation in CPLOL (1)

Chart summarizing the number of mandates (votes) according to the number of inhabitants per country (official source: Eurosources : 2001 census).

(to give a number of votes according to the number of speech and language therapists or the number of members in each association would be too uncertain and could lead to conflict and fraud).

Calculation : 1 extra vote granted for each started group of 10 000 000 inhabitants
